
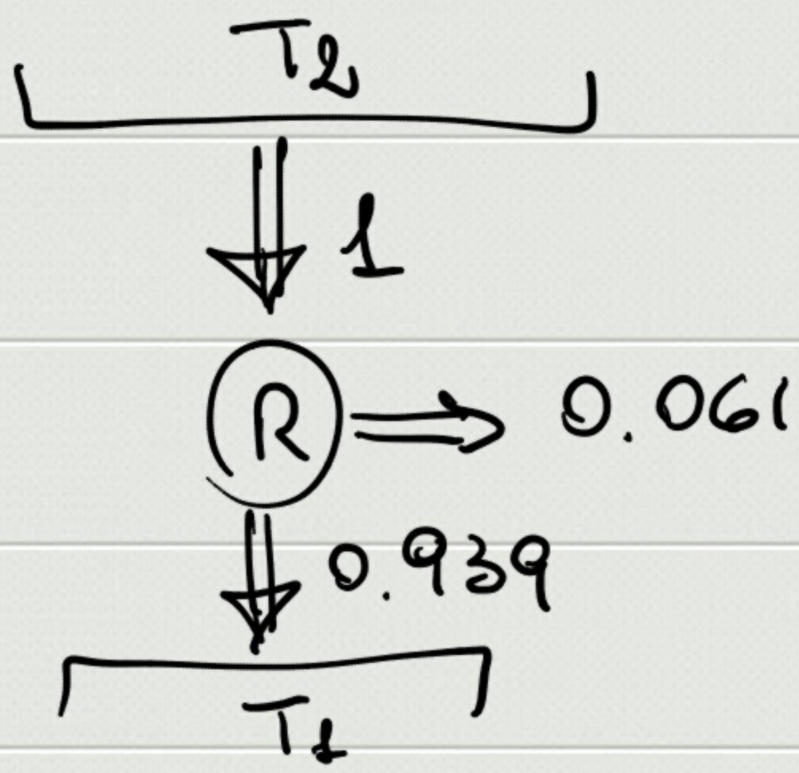
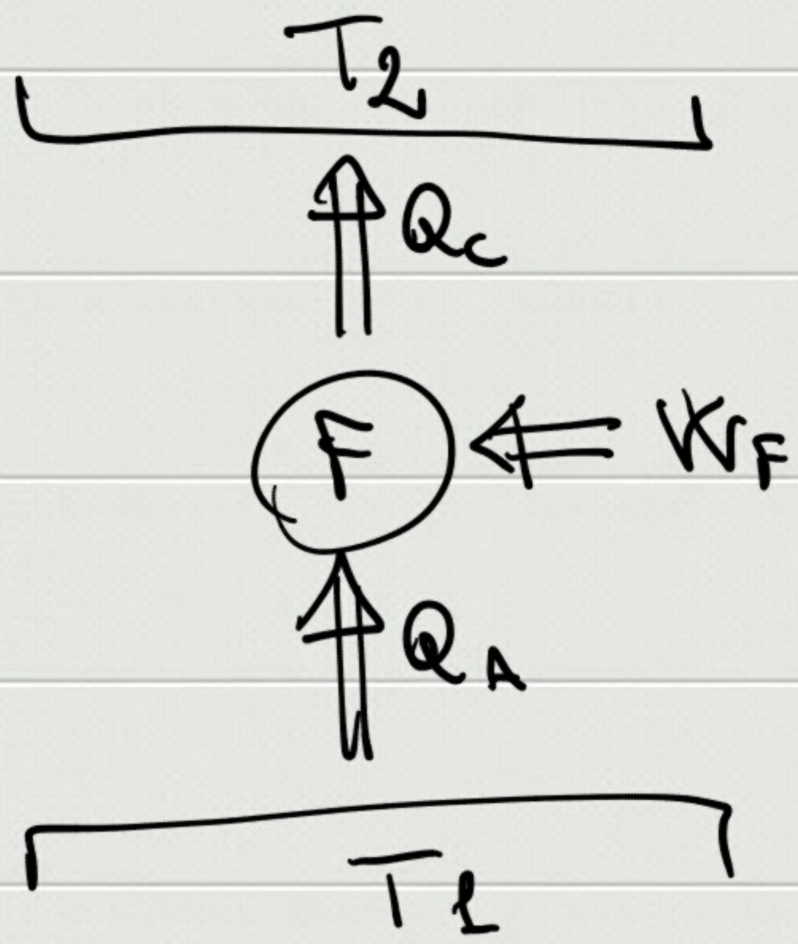
$$\eta = 1 - \frac{T_1}{T_2} = \frac{T_2 - T_1}{T_2} = \frac{\Delta T}{T_2}$$

$T_1 = 277\,K = 4^\circ C$

$T_2 = 295\,K = 22^\circ C$

$\Rightarrow \eta = 0.061$





$$= \frac{Q_A}{|W_F|}$$

$$\xi = \frac{T_1}{|T_1 - T_2|} = \frac{T_1}{\Delta T}$$

$$\xi = 15.4 \Rightarrow |W_F| = \frac{Q_A}{\xi}$$

$T_1 = 4°C \quad T_2 = 22°C$
